

WMK-800 Rack

19" mounting base for up to 2 WMK-80x devices

The WMK-800 Rack mounting base can accommodate a maximum of two WMK-80x devices. This creates a 16-mux multiplexer setup that fits into a standard 19" equipment rack within just 1U of rack space.

It is also compatible with IPTV multicast-based WMK-80x devices.

The WMK-80x units are secured through the bottom plate using four M3 TX10 screws, and on the front panel side with two M4 and two M3 Phillips PH2 pan head screws. The power supplies can be neatly positioned next to the device and secured with the included M4 nuts.

Descrambling CA modules can be very conveniently installed into the units through the slots in the front panel.
